

Carving with Star

This dental unit is the outcome of perfect balance between suspended cuspidor with removable ceramic bowl and stainless steel tap pipes and a robust floor-standing Moon chair together with the smart optimization of space and functionality.

A ceiling-mounted 5-housing instrument doctor console with S.P.R.I.D.O. technology allows installing micromotors with fixed or progressive speed, based on a pre-set memory system. Stop system can be installed for each dynamic instrument to avoid its pulling or dragging back.

A wide range of water decontamination products and amalgam separators can be applied for excellent hygiene both of instruments and suction tubes.

Swivelling and suspended cuspidor assembled to floor-standing chair
